JUNE FUN FACTS

- June in other languages: Chinese (Mandarin) - Liùyuè, Danish - Juni, French - Juin, Italian - Giugno, Latin - Iunius, Spanish - Junio
- June in the Northern Hemisphere is similar to the month of December in the Southern Hemisphere.
- In any year, no month begins on the same day of the week as June.
- Solstice comes from the Latin words "sol" meaning Sun and "sistere" meaning to come to a stop or stand still. On the day of the June solstice, the Sun reaches its northernmost position, as seen from the Earth. At that moment, its zenith does not move north or south as during most other days of the year, but it stands still at the Tropic of Cancer. It then reverses its direction and starts moving south again.
